PROJECTS

Where in the world?

Description: A web application that retrieves information about all the countries of the world from a data.json file. In addition, the customer can check more detailed information for a specific country. Additional features include filtering by region, searching for a country by name, and a dark theme.

tech stack: react, tailwind   **Live site:** countryapiadek.netlify.app   **github:** tinyurl.com/CountryApi

Pomodoro Timer

Description: An application used to monitor the timing of the "Pomodoro" method. The user can customize the style of the page and the timing of the timers.

tech stack: react, tailwind   **Live site:** pomodorotimeradek.netlify.app   **github:** tinyurl.com/pomtim

Dev Finder

Description:A web application that enables real-time text analysis. It allows you to count characters, words and sentences, set a character limit and display a warning when it is exceeded. Additional features include the ability to exclude spaces from counting, reading time estimation and letter density analysis.

tech stack: Next.js, typescript, tailwind   **Live site:** tinyurl.com/nextchar   **github:** tinyurl.com/gitChar
